CLINICAL TRIAL

What you need to know.

A massive thank you
to the young people from YTB-UK
for making this leaflet.

Risk

We face risks everyday. This doesn't mean they are bad, we just need information to understand risks and then decide if we want to take them.

All medicines

have risks

of side effects

Headaches

Nausea

Risk = Side effect

Neural Tube Defects

Neural Tube Defects in babies can happen in the first two months of pregnancy. It can cause serious problems in children affecting their brain or spine.

Healthy

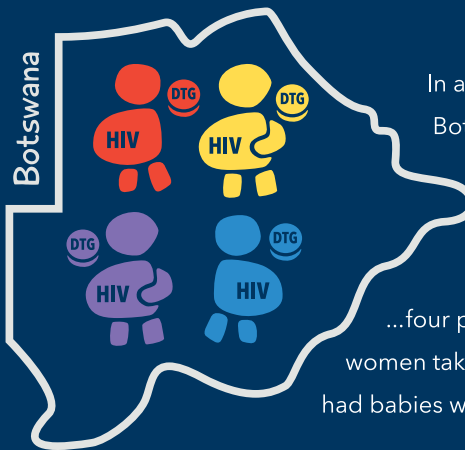

Anencephaly

Spina bifida

NTD happens in **1 in 1000** of ALL pregnancies

This MIGHT mean DTG changes the risk of having a baby with NTD to

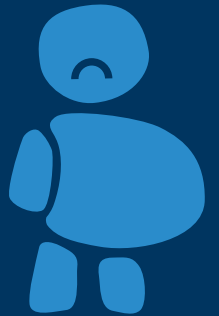

1 in 100

What to do...

Talk to your doctor if you want to...

Avoid pregnancy

Use contraceptive that you know works

if you get pregnant

Switching medication can help!

Don't know

Think you might be pregnant? Talk to your doctor quickly!

Don't stop taking your HIV medicine!!
